

PRD: AI-Powered Client Insight Agent

Component 1: Application of Frameworks

1. Jobs-To-Be-Done (JTBD) Framework

Primary Job (Core JTBD)

When preparing for a client meeting, sales representatives want to quickly understand the client's current context, needs, risks, and opportunities so they can conduct a confident, personalized, and impactful discussion.

Functional Jobs

- Aggregate client information from multiple sources (CRM, emails, LinkedIn, news)
- Identify key account changes and recent signals
- Generate relevant talking points and recommendations
- Prepare efficiently within limited time before meetings

Emotional Jobs

- Feel confident and well-prepared before client interactions
- Reduce anxiety caused by missing or outdated information
- Avoid embarrassment during client discussions

Social Jobs

- Appear knowledgeable and professional in front of clients
 - Maintain credibility with managers and stakeholders
 - Be perceived as a trusted advisor rather than a transactional seller
-

2. User Persona & Pain Points

User Persona: B2B Sales Representative

Role: Account Executive / Relationship Manager

Experience: 2–8 years in B2B sales

Environment: Uses multiple tools (CRM, email, LinkedIn, news portals)

Goals

- Close deals faster
- Deliver personalized client interactions
- Build long-term client relationships

Key Pain Points

- Client data scattered across multiple platforms
 - Time-consuming manual research before meetings
 - Information overload with no prioritization
 - Missed client updates (funding, leadership changes, risks)
 - Inconsistent quality of preparation across sales reps
 - High stress due to limited preparation time
-

3. Problem Validation: Frequency & Severity

Problem Frequency

- Sales reps prepare for 2–5 client meetings per day
- Manual research required before almost every meeting
- Problem occurs daily for most sales professionals

Problem Severity

High severity due to:

- 1–2 hours spent per meeting on preparation
- Missed insights leading to poor personalization
- Lower client engagement and trust

- Reduced conversion rates and deal delays
- Direct impact on revenue and sales productivity

Evidence Indicators

- Heavy reliance on spreadsheets, bookmarks, and manual notes
 - Inconsistent meeting outcomes across team members
 - Feedback from reps about lack of time and information clarity
-

4. Key Success Metrics & Measurement

Efficiency Metrics

- **Reduction in average meeting preparation time**
 - Target: 50% decrease
 - Measurement: Time tracking before vs after product adoption

Adoption Metrics

- **Percentage of sales reps actively using the tool**
 - Target: 80% weekly active users
 - Measurement: Usage analytics and login frequency

Preparedness Metrics

- **Sales rep self-reported readiness score**
 - Target: 75% reps reporting high confidence
 - Measurement: In-app surveys post-meeting

Business Impact Metrics

- **Increase in meeting-to-opportunity conversion rate**
 - Target: 10–15% improvement
 - Measurement: CRM pipeline data comparison

Quality Metrics

- **Client feedback on meeting relevance and personalization**
 - Measurement: Post-meeting feedback or NPS trends
-

Component 2: Value Proposition Canvas

Customer Profile (Sales Representative)

Customer Jobs

- Prepare for client meetings efficiently
- Understand client company context, priorities, and risks
- Personalize conversations and recommendations
- Stay updated on client news, financials, and industry trends
- Conduct confident, high-quality client interactions
- Improve win rates and relationship quality

Customer Pains

- Client data scattered across CRM, emails, LinkedIn, news, and internal tools
- Excessive time spent manually researching before meetings
- Information overload with no clarity on what matters most
- Outdated or missed insights due to fast-changing markets
- Inconsistent preparation quality across meetings
- Anxiety about being underprepared in front of clients

Customer Gains

- Faster and stress-free meeting preparation
- Clear, prioritized insights relevant to the meeting context
- Higher confidence during client interactions
- Personalized conversations that impress clients
- Better meeting outcomes and deal progress
- More time spent selling, less time researching

Value Map (Product)

Products & Services

- AI-powered client insight aggregation platform
- Unified dashboard integrating CRM, emails, LinkedIn, news, and internal data
- Meeting-ready briefs generated automatically
- Real-time alerts on client and industry changes
- Personalization recommendations for each client

Pain Relievers

- Eliminates manual research by centralizing all client data
- AI filters noise and highlights only relevant insights
- Auto-refreshes insights to avoid outdated information
- Standardizes preparation quality across all sales reps
- Reduces preparation time before every meeting

Gain Creators

- Saves 50%+ time spent on pre-meeting research
- Provides meeting-specific, actionable insights
- Improves confidence and preparedness of sales reps
- Enables highly personalized, value-driven conversations
- Helps sales reps focus on selling, not searching

Value Proposition Answers

What exact problem does your product solve?

Manual, time-consuming, and fragmented client research that leads to missed insights and weak client interactions.

Who is the primary user of your product?

Sales representatives in mid-to-large B2B firms.

What is the core value your product delivers?

Instant, relevant, and meeting-ready client insights in one place.

Why does this problem matter to the user?

Poor preparation directly impacts confidence, client trust, and deal outcomes.

How is your solution better than existing alternatives?

Unlike CRMs or manual research, it aggregates, prioritizes, and contextualizes insights automatically using AI.

One-line Value Proposition

"An AI-powered platform that delivers meeting-ready client insights in one place—so sales reps spend less time researching and more time closing."

Why would a user choose your product today?

Immediate time savings, better preparation, and visible improvement in client conversations.

What user pain does your product reduce the most?

Time-intensive and fragmented pre-meeting research.

What outcome does the user achieve?

Better-prepared meetings, stronger client engagement, and higher conversion rates.

What assumption are you making about user value?

Sales reps value time savings and relevant insights more than raw data access.

How did you validate that this value matters?

Through observed sales workflows, industry benchmarks, and reported pain points around meeting preparation.

What happens if this value proposition fails?

Low adoption, continued reliance on manual research, and no measurable sales impact.

Which feature directly supports your value proposition?

AI-generated meeting briefs with prioritized client insights.

What trade-offs did you make?

Focused on insight quality and relevance, not full CRM replacement.

How will you measure whether users get this value?

- Reduction in prep time
- User preparedness surveys
- Usage of meeting briefs
- CRM conversion metrics

Component 3: MVP Design

1. User Flow / Node Flow (AI Agent Flow)

Primary User Flow (Sales Representative)

Goal: Prepare for a client meeting in minimum time with maximum relevant insights.

Flow Steps

1. **Login / Authentication**
 - User logs in via SSO (Google / Microsoft / CRM login)

2. Upcoming Meetings Detected

- System syncs calendar (Outlook / Google Calendar)
- Displays upcoming client meetings

3. Select Client Meeting

- User clicks on a specific meeting

4. AI Agent Triggered

- AI agent automatically gathers data from:
 - CRM (account, deals, notes)
 - Emails & calendar history
 - LinkedIn (company & stakeholder updates)
 - News & financial sources
 - Internal documents (if permitted)

5. Insight Processing & Prioritization

- AI filters noise
- Identifies:
 - Recent company events
 - Stakeholder changes
 - Risks & opportunities
 - Conversation talking points

6. Meeting-Ready Brief Generated

- One-page AI-generated summary:
 - Client snapshot
 - Key insights
 - Suggested agenda
 - Personalization tips

7. User Review & Action

- User reviews insights
- Option to:
 - Add notes
 - Save to CRM
 - Share with team

8. Post-Meeting Feedback (Optional)

- Quick feedback to improve AI recommendations
-

2. Information Architecture (IA)

Top-Level Navigation

Section	Contents
Dashboard	Upcoming meetings, Recently viewed clients, Alerts & insights
Client Profiles	Company overview, Stakeholders, Historical interactions, AI insights timeline
Meeting Briefs	AI-generated summaries, Agenda suggestions, Talking points, Risks & opportunities
Insights Feed	Real-time updates, Industry news, Client-triggered alerts
Notes & Actions	Personal notes, CRM sync, Follow-up reminders
Settings	Data sources, Privacy & permissions, Notification preferences

Information Hierarchy (Priority Order)

1. Most urgent meeting insights
2. High-impact client changes
3. Deal-related risks/opportunities
4. Supporting background information

(Designed to reduce information overload)

3. Wireframes (Low / Mid / High Fidelity)

Low-Fidelity Wireframes (Structure Focus)

Dashboard

- Header: Logo + Search
- List: Upcoming meetings
- CTA: "Generate Meeting Brief"

Meeting Brief Screen

- Section 1: Client overview
- Section 2: Key insights (bulleted)

- Section 3: Suggested talking points
- Section 4: Notes

Purpose: Validate layout, flow, and basic interaction patterns without visual styling

Mid-Fidelity Wireframes (Interaction Focus)

Dashboard

- Clickable meeting cards
- Insight badges (New / High Priority)

Meeting Brief

- Expandable insight sections
- Highlighted AI recommendations
- Save/share buttons

Purpose: Test usability, validate navigation, and content grouping

High-Fidelity Wireframes (Visual + UX Polish)

Dashboard

- Clean enterprise UI
- Icons for insights, alerts, meetings
- Visual priority indicators

Meeting Brief

- Clear typography
- Color-coded insight types
- Confidence-focused layout (minimal clutter)

Purpose: Stakeholder demos, user testing, and investor presentation

MVP Scope Justification

Included in MVP

- AI-generated meeting briefs
- Core data integrations

- Insight prioritization
- Simple feedback loop

Excluded from MVP

- Full CRM replacement
- Advanced analytics dashboards
- Custom AI training per user

➡ Focused on maximum value with minimal complexity

Component 4: Project Plan

1. Project Objective Document

Project Objective

To design and deliver an AI-powered client insight solution that helps sales representatives in mid-to-large B2B firms reduce the time spent on manual pre-meeting research by providing timely, relevant, and centralized client insights, leading to better personalization, stronger client engagement, and improved sales outcomes.

Primary Goals

- Reduce preparation time before client meetings
 - Improve quality and consistency of sales conversations
-

2. Problem Scope Definition

In-Scope Problem

- Sales reps spending excessive time gathering client information
- Client data scattered across CRM, emails, LinkedIn, and news sources
- Difficulty identifying relevant and up-to-date insights
- Inconsistent preparation quality across meetings

Out-of-Scope Problem

- Sales forecasting and pipeline management
- CRM system replacement

- Post-sales customer support workflows
 - Live meeting assistance or transcription
-

3. In-Scope Feature List

Derived directly from "deliver timely, relevant insights in one place":

- Calendar integration to identify upcoming client meetings
 - AI agent to aggregate client data from multiple sources
 - AI-generated meeting-ready client briefs
 - Prioritized insights (what matters most for the meeting)
 - Client profile overview
 - Manual note-taking before meetings
 - Basic CRM integration for saving notes
 - Feedback mechanism to improve insight relevance
-

4. Out-of-Scope Feature List

Explicitly excluded to maintain focus on pre-meeting preparation:

- Full CRM functionality
 - Advanced analytics dashboards
 - Custom AI training per organization
 - Real-time meeting transcription or voice assistants
 - Automated deal negotiation or pricing suggestions
 - Marketing automation tools
-

5. Success Criteria Definition

Product Success

- $\geq 50\%$ reduction in time spent on pre-meeting research
- $\geq 75\%$ of users feel "well-prepared" within 30 days
- $\geq 80\%$ active usage among sales reps in the first quarter

Business Success

- 10–15% improvement in opportunity-to-deal conversion rates
- Improved client feedback on personalization and relevance

User Experience Success

- AI-generated meeting brief delivered within 30 seconds
- High relevance score in user feedback surveys

6. Project Timeline (12 Weeks)

Phase	Duration	Key Activities
Discovery & Planning	Week 1–2	Problem validation, scope definition, success metrics
UX Design	Week 3–4	User flows, IA, wireframes
MVP Development	Week 5–8	AI agent, data aggregation, meeting briefs
Testing & Validation	Week 9–10	Functional testing, usability testing
Demo Preparation	Week 11	Demo flow, feedback iteration
Final Delivery	Week 12	Final documentation and submission

7. Milestone List

- Problem and user scope finalized
- User flow and IA approved
- Low–mid fidelity wireframes completed
- AI agent prototype functional
- Meeting brief generation live
- Internal demo completed
- Final project submission ready

8. Roles and Responsibility Matrix

Role	Responsibilities
Product Manager	Product vision, problem definition, MVP scope, roadmap, success metrics

UX Designer	User flows, information architecture, wireframes, usability testing
AI Engineer	Client insight aggregation, relevance scoring, prioritization logic
Backend Engineer	Data ingestion, APIs, CRM/news integrations, data processing
Frontend Engineer	Sales Copilot UI, dashboards, interaction implementation
QA Tester	Functional testing, AI output validation, regression testing
Sales Stakeholders	Domain input, insight validation, feedback on usefulness
Compliance / Security	Data privacy, access control, regulatory review

9. Tools and Tech Stack List

Design & Planning

- Figma – wireframes
- Miro – user flows
- Notion – documentation

Frontend

- React / Next.js

Backend

- Python (FastAPI) or Node.js

AI & Data

- LLM APIs for insight summarization
- Vector database for contextual retrieval

Integrations

- CRM APIs (e.g., Salesforce)
 - Calendar APIs
 - Professional data and news APIs
-

10. Demo Plan

Demo Scenario

1. Sales rep logs in
2. Upcoming client meeting is displayed
3. User selects meeting
4. AI generates a meeting-ready client brief
5. User reviews insights and adds notes
6. Brief is saved to CRM

Demo Goals

Demonstrate:

- Time saved
 - Insight relevance
 - Improved meeting preparedness
-

11. Final Delivery Checklist

- Refined problem statement
 - Target users & pain points
 - Success metrics
 - MVP feature list
 - User flows & IA
 - Wireframes
 - Project plan
 - Demo walkthrough
 - Final submission document
-

Component 5: Viability Check

1. Market Demand Assumption

Assumption: Mid-to-large B2B organizations have a strong demand for tools that reduce sales preparation time and improve meeting effectiveness.

Basis from Problem Statement

- Sales representatives have multiple client meetings each week
- Excessive time spent on preparation directly impacts productivity and outcomes

Why This Demand Exists

- Sales productivity is directly tied to revenue
 - Organizations actively invest in tools that improve sales efficiency
-

2. Willingness-to-Pay Assumption

Assumption: B2B firms are willing to pay for a solution that demonstrably saves sales reps time and improves deal outcomes.

Justification

- Sales tools are typically funded at the team or organization level
- Time savings and conversion uplift provide a clear ROI

User Perspective

- Managers and leadership value productivity gains
 - Sales reps benefit from improved preparedness and performance
-

3. Revenue Model Selection

Selected Model: Subscription-based SaaS (B2B)

Reasoning

- Continuous value through ongoing insights
- Predictable revenue for the business
- Aligns with enterprise buying behavior

Subscription Level

- Charged per user per month
-

4. Pricing Assumption

Pricing Hypothesis

₹2,000–₹5,000 per user per month (or equivalent enterprise pricing)

Pricing Rationale

- Comparable to existing B2B sales productivity tools
 - Justified by time saved and revenue impact
 - Positioned as a productivity enhancement, not a CRM replacement
-

5. Cost Estimate

Primary Cost Components

- AI API usage (insight generation)
- Backend infrastructure (data processing & storage)
- Third-party data integrations
- Product development and maintenance
- Customer onboarding and support

High-Level Estimate

- Higher upfront development cost
 - Moderate ongoing operational cost per user
-

6. Resource Availability Check

Required Resources

- Product Manager
- UX Designer
- Backend Engineer
- AI Engineer
- Frontend Engineer
- QA Tester

Availability Assessment

- Skills required are standard in modern SaaS teams

- No dependency on rare or proprietary talent
 - Development feasible with a small cross-functional team
-

7. Operational Feasibility Check

Operational Considerations

- Data privacy and compliance (especially client data)
- Integration reliability with CRMs and calendars
- AI accuracy and relevance

Feasibility Assessment

- Operates as a read-first system (low operational risk)
 - Minimal workflow disruption for users
 - Gradual rollout possible (pilot → scale)
-

8. Competitive Viability Assessment

Competitive Landscape

- **CRMs:** Provide data but not meeting-ready insights
- **Manual research:** Time-intensive and inconsistent
- **Sales enablement tools:** Limited personalization

Competitive Advantage

- Focused on pre-meeting insight preparation
- AI-powered prioritization, not just data aggregation
- Designed around daily sales workflows

Viability Conclusion

- Differentiated by speed, relevance, and context
 - Complements existing tools instead of replacing them
-

Component 6: Use of AI

1. AI Use Case in the Product

Primary AI Use Case

Automated aggregation, summarization, and prioritization of client-related information to generate meeting-ready insights for sales representatives.

Problem Addressed

- Manual, time-consuming research
- Scattered and outdated client information
- Difficulty identifying what matters most before meetings

AI Role

Reduce cognitive and time burden by converting raw data into actionable insights.

2. GenAI / Agentic AI Use Case

GenAI Use Case

- Generate concise summaries of client context
- Create meeting briefs and talking points
- Translate large volumes of unstructured data into readable insights

Agentic AI Use Case

- Act autonomously to prepare meeting insights without user prompting
- Continuously monitor client and industry updates
- Trigger actions based on calendar events

 **The AI behaves as a pre-meeting preparation agent, not a general assistant.**

3. Agent Responsibility

The AI Agent Is Responsible For

- Detecting upcoming client meetings
- Collecting relevant client data from approved sources
- Filtering and ranking insights based on relevance

- Generating a concise meeting-ready brief
- Updating insights when new information becomes available

Explicitly NOT Responsible For

- Making deal decisions
 - Communicating directly with clients
 - Executing sales actions autonomously
-

4. Agent Trigger

Primary Triggers

- Calendar event scheduled with a client
- Upcoming meeting within a defined time window (e.g., 24–48 hours)

Secondary Triggers

- Significant client or industry update
 - User manually requests insight refresh
-

5. Agent Boundaries

Data Boundaries

- Access only to user-authorized data sources
- Read-only access for external platforms unless explicitly permitted

Functional Boundaries

- Provides recommendations, not decisions
- Does not modify CRM records automatically
- Does not act during live client meetings

Ethical Boundaries

- No hallucination of facts
 - Clear distinction between verified data and AI inference
-

6. Failure Handling

Failure Scenario	Handling Strategy
Data source unavailable	Show partial insights with source disclaimer
Low confidence insights	Flag insights as "low relevance"
Incomplete client data	Prompt user for manual input
AI generation error	Fallback to raw data view
Incorrect insight	User feedback loop to improve model

User Transparency

- Clear confidence indicators
 - Option to view original data sources
-

7. AI Success Metrics

Efficiency Metrics

- % reduction in pre-meeting preparation time
- Time taken to generate meeting brief

Quality Metrics

- User rating of insight relevance
- % of insights marked "useful"

Adoption Metrics

- Frequency of AI brief usage
- Repeat usage before meetings

Business Impact Metrics

- Improvement in meeting feedback scores
 - Uplift in deal conversion rates
-

Component 7:

Demo/Prototype

(Login with any email-ID and password & press 'Sign In' Button)

2. **AI Agent Workflow Prototype Link - <https://us2.make.com/public/shared-scenario/aJLJLgIUiVo/integration-chat-bot>**

Component 8: Success Metrics

1. **User / Customer Metrics**

Used in: Product validation, onboarding, adoption tracking

Key Metrics

- **NPS (Net Promoter Score)** – User satisfaction and recommendation likelihood
- **DAU / MAU** – Daily and monthly active users
- **Activation Rate** – % of users fully engaged with core features
- **Team-level Adoption Rate** – Org-wide rollout progress

Where They Are Used

- **Product team:** Validate product-market fit
- **Onboarding flow:** Improve first-time experience
- **Leadership dashboard:** Decide org-wide rollout

Example: After 30 days, PM checks NPS & DAU/MAU to see if reps trust and regularly use AI-generated meeting briefs.

2. Business & Revenue Metrics

Used in: Pricing, ROI justification, enterprise sales

Key Metrics

- **Opportunity-to-deal conversion uplift**
- **Time saved per sales rep**
- **Cost savings / ROI per rep**

Where They Are Used

- **Sales leadership (CRO):** Approve budget
- **Procurement:** Evaluate ROI
- **Founders / PM:** Pricing strategy

Example: CRM analytics show a 12% conversion uplift → validates AI insights improve deal outcomes.

3. Product Usage & Engagement Metrics

Used in: Feature prioritization, roadmap decisions

Key Metrics

- **Average prep time per meeting**

- **Core AI feature usage**
- **Weekly retention**
- **Session frequency before meetings**

Where They Are Used

- **Product roadmap:** Decide what to build next
- **UX design:** Simplify flows
- **MVP evaluation:** Remove unused features

Example: If "AI Client Brief" usage is 70%, it stays central in MVP.

4. AI Performance Metrics

Used in: Model tuning, trust building, compliance

Key Metrics

- **Insight relevance score**
- **AI error rate**
- **Data freshness SLA**
- **Hallucination frequency**

Where They Are Used

- **AI/ML team:** Retrain models
- **Compliance team:** Risk approval
- **PM:** Decide when AI can act autonomously

Example: If relevance drops below 80%, AI outputs are flagged for review.

5. Growth Metrics

Used in: Scaling strategy, expansion decisions

Key Metrics

- **Team expansion rate**
- **Referral-driven adoption**
- **Account expansion rate**

Where They Are Used

- **Go-to-market team:** Expansion strategy
- **PM:** Feature scaling
- **Leadership:** Market fit confirmation

Example: Sales teams invite peers after seeing value → signals organic growth.

6. Quality, Trust & Reliability Metrics

Used in: Risk management, enterprise readiness

Key Metrics

- **System uptime**
- **Critical failure rate**
- **Security incidents**
- **Latency before meetings**

Where They Are Used

- **Engineering/DevOps:** Reliability
- **Enterprise IT:** Vendor approval
- **PM:** SLA commitments

Example: Copilot must load within seconds before meetings → latency tracked.

7. AI / Data / Automation Metrics

Used in: Differentiation, automation depth

Key Metrics

- **Manual research reduction**
- **Automation success rate**
- **Data source coverage**
- **AI-trigger success rate**

Where They Are Used

- **PM:** Validate AI value

- **Engineering:** Automation reliability
- **Leadership:** Competitive differentiation

Example: AI auto-generates 5 insights from 6 data sources → manual research reduced by 50%.

8. Qualitative & Quantitative Success Metrics (Overall Product)

Used in: Long-term success evaluation

Key Metrics

- **Preparedness score**
- **Client meeting feedback improvement**
- **CSAT**
- **User testimonials**

Where They Are Used

- **Product narrative:** Value storytelling
- **Case studies:** Market positioning
- **Academic evaluation:** Proof of impact

Example: 75% of reps feel "very prepared" → emotional + functional success.
