

Automated Sales Insights Project Proposal (PS6)

1) Specific Problem Statement

Selected Problem Statement: How might we design an AI-powered agent to automatically curate and deliver timely, contextual company insights—sourced from financial data, news, and social media to sales representatives before meetings so that they are better informed and reduce manual research time for them?

Refined Problem Statement: Sales representatives in mid-to-large B2B firms spend excessive time manually gathering scattered client information, often leading to missed insights and weaker interactions. An AI-powered solution that delivers timely, relevant insights in one place would save preparation time, enhance personalization, and improve client engagement and outcomes.

2) Target User Segment and Pain Points

Target Segment

- **Primary Users:** Sales representatives (ages 25–45) in enterprise software, financial services, and B2B consulting firms.
- **Secondary Stakeholders:** Sales managers, business development, customer success teams.
- **Technical Enablers:** AI/IT teams, product managers.
- **Strategic Leaders:** CRO, CIO, compliance teams.
- **Indirect Actors:** Clients and data vendors.
- All operate in environments with multiple client meetings each week and rely heavily on laptops, mobile devices, CRMs, and professional networking platforms for daily work.

Key Pain Points

- **Time-intensive preparation:** Hours spent manually sourcing insights from scattered channels.
- **Information overload:** Difficulty identifying what is most critical and relevant.
- **Missed or outdated insights:** Rapid market changes make staying current difficult.
- **Inconsistent preparation quality:** Varies due to individual skills, time, and resources.

3) What Does Success Look Like?

- **Efficiency gains:** At least a 50% reduction in time spent on pre-meeting research, validated through time-tracking and self-reported surveys.
- **Stronger preparedness:** At least 75% of sales representative's report feeling "well-prepared" or "very well-prepared" for client meetings within the first 30 days of system use.
- **Improved meeting effectiveness:** A minimum 20% improvement in client feedback ratings related to personalization and relevance of meetings, tracked using structured post-meeting surveys.
- **Business impact:** A measurable 10–15% uplift in opportunity-to-deal conversion rates within six months of adoption, validated using CRM analytics.
- **User adoption:** At least 80% active usage among target sales teams within the first quarter, demonstrating real integration into daily workflows.
